## FUEL SUPPLY AND LOGISTICS

Renewable Fuels Ltd is one of UK's leading providers of biomass fuels, offering a complete range of quality fuels from the UK and abroad. The use of biomass as a fuel to generate electricity has been shown to be effectively carbon neutral and makes a significant contribution towards UK renewables targets and the reduction of CO<sup>2</sup> emissions.

The company works with several major power providers to create green energy through the co-firing of processed biomass with coal. In addition, we supply fuels to small commercial end-users, as well as domestic customers.

### INDUSTRY PROBLEMS

Limited energy crop experience.

Shortage of biomass fuels.

Lack of processed fuel for co-firing.

Renewables Obligation for co-firing targets for power providers.

### OUR SOLUTION

Establishment of UK energy crops based on 20 years of Swedish experience, world leaders in energy crop development.

Supply of both UK and imported biomass fuels. Sourced, processed and delivered.

Quality control and processed fuel supply suitable for pulverised boilers.

Feasibility studies and management of supply chains for energy crops.

Printed on environmentally friendly paper.

**FUEL TYPES** →

**The success of co-firing in power stations has led to rapid developments in the renewables biomass markets. Through research into new fuels and processing techniques we help the power stations meet the Renewables Obligation targets set by the government.**
